title: Stateless Packet Filtering

module: oasis-open.org/openc2/v1.0/ap-slpf

version: wd02

description: Data definitions for Stateless Packet Filtering (SLPF) functions

exports: Target, Specifiers, Args, Results

3.2 Structure Types

3.2.1 Target

SLPF targets

Та	rget (Choice)		
ID	Name	Type	Description
1	access_rules	Rules	Return the requested access rules in the response

3.2.2 Rules

Specifiers for the access_rules target

Rul	Rules (Map)					
ID	Name	Type	#	Description		
1	allow_rules	Rule-Target	01	Return specified allow rules		
2	deny_rules	Rule-Target	01	Return specified deny rules		

3.2.3 Rule-Target

Specifier for an access rule

Ru	Rule-Target (Choice)			
ID	Name	Type	Description	
1	all	Null	Any rules	
2	ip_addr	: I P–Addr	Rules affecting the specified address	
3	ip_connection	:IP-Connection	Rules affecting the specified 5-tuple	

3.2.4 Specifiers

SLPF actuator specifiers

Specifiers (Map)					
ID	Name	Type	#	Description	
1	nfv_id	String	1	Identifier of a virtualized packet filter	

3.2.5 Args

SLPF command arguments

Args (Map)					
ID	Name	Туре	#	Description	
1	block-method	Block-Method	1	How to handle denied packets	
2	insert	Integer	1	Position of a rule in access list	

3.2.6 Block-Method

Block-Method (Enumerated)

ID Name

Description

- 1 drop
- 2 reject
- 3 deceive

3.2.7 Results

SLPF results

Results (Map)

ID Name Type

Description

1 access_rules Rule-Item 0..1 Access rules matching a query

3.2.8 Rule-Item

Rule-Item (Array)

ID Type

Description

1 Integer

"id": Rule identifier within a ruleset

2 Rule-Action

1 "action": Allow or Deny

3 Rule-Target 1 "rule": Matching criterion

1

3.2.9 Rule-Action

Rule-Action (Enumerated)

ID Name Description

allow Matching packets are permitted
deny Matching packets are blocked

3.3 Primitive Types

Name Type Description
